

PROTECTIVE PADS

Always ensure that there are protective pads under all furniture, especially tables and chair legs. Replace the pads as they become dirty or worn. For very heavy furniture, use wide, non-staining rubber cups. This will protect the timber floor from being scratched and also reduce the noise.

MOVING FURNITURE

Extreme care should be taken when moving and placing furniture. Furniture should be lifted and placed not dragged or pushed.

SPILLS

Wipe up spills immediately.

It is important to wipe up spills immediately on coated flooring even if the spill is water. The longer the spill is left the more aggressive the cleaner needs to be, and this may affect the longevity of the floors appearance.

Take extra care in areas around sinks, dishwashers, stove tops and dining rooms, or anywhere there is a chance of harmful spills.

HIGH HEELED SHOES

Damaged or worn high-heeled shoes may have exposed metal tips, which will cause damage to both the floor and the surface finish. If these are to be worn, always ensure they are kept in good condition.

TOUCH UP OF MINOR SCRATCHES

Dirt or grit particles may leave white scratches on surface of the floor boards, LOBADUR® is recommended to be applied for fixing these scratch marks.

After a basic cleaning, minor white scratches can be made less obvious by rubbing in some LOBADUR® ProColor (colour depends on the wood species) with a cloth, or timber touch up pens. ProColor has to be wiped off the surface so it will remain only in the scratch. After a drytime of approximately 2 hours LOBA® ParkettCare can be applied on the whole floor.

APPLICATION OF POLISH

It is recommended to refresh your timber floor after certain time of wear and tear on the coating from daily traffic.

Loba ParkettCare is a tough, durable and mark resistant finish that is a great "freshen up" or protective layer, ideally suited to application on top of sealed timber floors. This non-toxic water based polish aids in protecting sealed surfaces and enhances their appearance especially in heavily used areas. A ParkettCare rejuvenation will extend the life of sealed timber flooring by creating a sacrificial wear layer where regular recoating is not possible.
